

Cleaning recommendations for floors and stairs of all kind

For KAMBA FLOOR

Important note: Do not clean a new coating mechanically until at **least one week** after application

You can use any standard household cleaner for routine cleaning. However, avoid using vinegar-based cleaners or vinegar concentrates.

Always follow the instructions for use for all cleaners! The cleaners must not contain any abrasive agents!

The cleaning fluid is best applied with a soft brush; the nylon bristle length should be at least 2.5 cm!

Brush in circular motions and then rinse with clean water.

In general, **KAMBA FLOOR** is resistant to disinfectants.

However, it is essential to follow the respective processing instructions! Never use cleaning concentrates undiluted and ensure that the application time does not exceed the manufacturer's recommendations! Always neutralize with cold, clear water.
